

QUICKNUBE ADMIN PANEL

1. Register a user (admin)
Register a user as you've always done. Please note that this user will have admin rights.
2. Edit the settings
Open the page "include/php/constants.php" with a text editor and change the line 26 "ADMIN_NAME". Enter the username of the user you've just recorded.
3. Now go to the page – www.yourdomainname.com/yourfolder/admin/
Now, if you've done this correctly, you can see the control panel, opening from the browser the "admin/" folder.
